

# Adobe InDesign Template Instructions

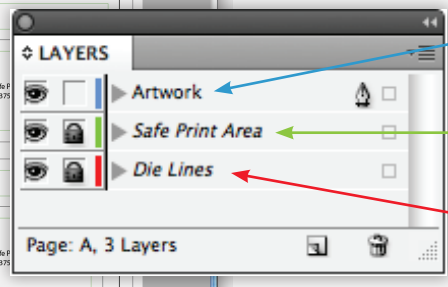

Please consult your equipment user's manual for instructions on how to run specialty paper, and equipment limitations.

Templates provided by Blanks/USA are intended to assist with proper document layout, format and setup when setting up artwork to print on Blanks/USA die cut products.

Adobe InDesign templates are available as an .inx file and can be used on versions CS3-CS5. Adobe InDesign templates are designed for print professionals and graphic designers; these templates show product guides and die cut lines.

This template is set-up using the Layers features.

- Click on the layer "Artwork" and design on this layer.
- The safe print area are on locked "Safe Print Area" layer of the master page that are set to not print.
- The die lines and measurements are on locked "Die Lines" layer of the master page that are set to not print.

- Safe Print Area**  
The area marked by the green line is called the safe print area. Please remember to keep all important information within this area.
- Die Lines**  
The areas marked by a black or gray line are the die lines. We suggest aligning art and type at least 1/4" away from perforations and die cuts. Many copiers and laser printers don't pull paper completely straight.
